

Ben Mishali

VP R&D · AI-Driven Development

+972 54-9764530 | benm.dev.io@gmail.com | linkedin.com/in/ben-mishali | github.com/ben9992

VP R&D leading a 40-person global R&D organization across Israel and Mexico, with 9+ years of engineering experience and 30–40% hands-on. Built the Spec-Driven Development (SDD) framework that takes work from ticket to reviewed PR through purpose-built agents, and rolled the agent stack out across every engineering discipline. Delivers public-safety and command-and-control platforms across Desktop, Web and Mobile. BSc Computer Engineering, MBA specialized in Technologies.

AI-DRIVEN DEVELOPMENT

SDD Framework — designed and built

Delivery decomposed into staged agents: intake → spec → architecture → plan → implement → test → independent review. Three human gates; everything between them runs unattended. Specs and plans are versioned, reviewable artifacts rather than throwaway chat history. Isolated Git worktrees let sub-agents run in parallel. Adopted across 40 engineers in two countries.

Agent Stack — defined and rolled out org-wide

Claude Code for orchestration (cross-file refactors, migrations, clean-context code review) · Cursor for the in-editor loop · MCP for one shared view of Jira, Confluence and the repo. Review standards hold AI-authored code to the same bar as human-authored code.

EXPERIENCE

KabatOne (formerly CityShob) 2025 – Present

VP R&D (30–40% hands-on)

- Lead a 40-person global R&D organization across Israel and Mexico plus outsourced teams, managing multiple team leaders and engineering disciplines.
- Built the SDD framework and drove agent-stack adoption (Claude Code, Cursor, MCP) across the organization.
- Own technical strategy and delivery for public-safety and command-and-control systems — Desktop, Web and Mobile.
- Own the R&D roadmap, architecture and quarterly planning; manage cross-border budgets, hiring, capacity planning and KPI frameworks.

Fibernet Ltd 2022 – 2025

Software Team Leader (70% hands-on) · Senior Software Engineer

- Led a team of 5 engineers using Agile, designing and building enterprise software across multiple platforms.
- Delivered MEAN-stack web applications on Linux and Windows; MoIP/AVoIP protocols and third-party room-control integrations.
- Built and maintained CI/CD infrastructure for faster, more reliable software delivery.

Elbit Systems 2017 – 2022

Software Engineer

- Developed real-time C++ applications and Qt UI (QML + C++), improving system response times and performance.
- Managed a team of engineers from the IDF, coordinating deliverables and the integration of new technologies.
- Built and optimized DevOps infrastructure — Jenkins, JFrog Artifactory, Azure DevOps, GitLab CI; RabbitMQ and Cassandra for data handling.

TECHNICAL SKILLS

AI-Driven Dev	Spec-Driven Development (SDD) · agentic workflows · multi-agent orchestration · Claude Code · Cursor · MCP · agent specs & skill libraries · AI code review standards
Languages	TypeScript · JavaScript · C++ · C# · Python · Groovy
Frameworks	Angular · React · Node.js · .NET · Qt/QML
DevOps & CI/CD	Kubernetes · Docker · ArgoCD · Rancher · Jenkins · GitLab CI · Azure DevOps · JFrog Artifactory
Data	MongoDB · SQL Server · Elasticsearch / ELK · RabbitMQ · Cassandra · REST APIs
Domain	MoIP / AVoIP · video streaming & coding · real-time systems · command & control

EDUCATION

MBA, Specialization in Technologies

Ruppin Academic Center · 2020–2021

BSc Computer Engineering

Ruppin Academic Center · 2016–2020

ALSO

Management Course, Fibernet Ltd (2024) | Mentor — Magshimim, Cyber Education Center (2017–2019) | 9 published technical articles on Medium | IDF Engineering Corps — Staff Sergeant (2011–2014)
